EDUCATION

B.S. in Computer Science

2026

Florida International University (FIU); Miami, Florida

- GPA: 3.9 | Honors: Dean's List Fall & Spring 2022, 2024, 2025. Spring 2023 & Summer 2024.

EXPERIENCE

AI & Software Engineering Intern

August 2026 – Present

KPSV Technologies

Concord, North Carolina (Remote)

- Engineered an automated web-scraping and **ETL pipeline** integrating LLM APIs to extract, validate, and parse unstructured web data into structured schemas.
- Architected scalable backend REST APIs to serve downstream applications, optimizing data ingestion pipelines for low-latency retrieval.

Site Reliability Engineer Intern

May 2026 – July 2026

Carnival Corporation

Miami, Florida

- Engineering customized observability dashboards and a **Dynatrace OpenPipeline** to automate **server-side log processing**, extracting actionable telemetry metrics and **Davis AI events** to accelerate root-cause analysis for the SRE team.
- Accelerated development workflows utilizing an internal **enterprise AI agent** (Kiro) to generate repository documentation and execute **spec coding**, refining prompt engineering while gaining **QA exposure** in strict testing environments.
- Leveraging **Splunk** for comprehensive **log analysis** and system observability, actively shadowing the SRE team to monitor real-time incident resolution workflows for high-traffic Carnival booking websites.
- Automated the release process for Dynatrace OpenPipelines by engineering deployment scripts integrated into the **enterprise CI/CD pipeline**, streamlining the software development lifecycle (SDLC) for **scalable architectures**.

AI Research Assistant

August 2025 – February 2026

VISAGE Lab (Florida International University)

Miami, Florida

- Tested, evaluated, and documented API integrations for **Virtual Intelligence Social Agents (VISAGE)**, troubleshooting workflows to optimize project performance.
- **Developed and modularized** functions for conversational agents that trigger visual cues, enhancing human-agent interaction realism and engagement.
- Developed a **comprehensive technical codebase** and **experimental pipeline** for an independent study on conversational agents, providing a **scalable foundation** for upcoming lab publications.

AI Engineering Intern

June 2023 – October 2023

M.S.E.I.P. Fellow Internship (St. Thomas University)

Miami, Florida

- Selected for the federally funded M.S.E.I.P. Fellowship (**top 5% selectivity**) to architect an **IoT-based AI assistant**, Python and Raspberry Pi to integrate multimodal LLM responses from OpenAI and Google Gemini APIs.
- Implemented voice input and output functionalities using Python libraries: **SpeechRecognition** for speech-to-text, **pyttsx3** and **gTTS** for text-to-speech, and **Playsound** for audio playback automation.
- Authored and presented peer-reviewed research on AI-driven hardware orchestration ([Voice Controlled Generative Artificial Intelligence IOT](#)) at the World Research Forum for Engineers, achieving **international publication and acceptance** at the WRFER Conference in Istanbul, Turkey to a global audience of engineering professionals representing **10+ countries**.

PROJECTS

Gamified Habit Tracker | Tailwind CSS, React Query, React Vite, RestAPI, Axios, React Router DOM

August 2025 – Dec 2025

- Developed a **gamified habit-tracking web app** using **Django**, **React (Vite)**, and **Tailwind CSS** to encourage consistent and healthy user habits through engaging game mechanics.
- Implemented real-time progress tracking via **RESTful APIs** and **React Query**, building a responsive UI to maximize user engagement.

Password Manager | React.js, Express.js, MongoDB, Node.js

March 2025 – May 2025

- Developed a full stack password management application using **React.js**, **Express.js** and **MongoDB**, enabling secure password storage and management.
- Built a secure authentication system using **JWT-based secure login**, email verification, and MongoDB, integrated with a customizable password generator to maximize user security.

RunwAI Outfit Generator | React.js, Flask, Supabase, Docker, Axios, PyTorch, CLIP

January 2025 – March 2025

- Designed and implemented an AI-driven outfit recommendation web app leveraging **OpenAI's CLIP** neural network (via **PyTorch**) to analyze clothing images and suggest compatible outfit combinations.
- Built REST APIs with **Flask** and integrated a **React.js** frontend for user interaction, using **Supabase** for authentication, **PostgreSQL** database, cloud file storage, and packaged services with **Docker** for **AWS-ready deployment**.

SKILLS

Programming Languages: Java, JavaScript, Python, C, C++, PostgreSQL (Supabase), MongoDB, MySQL, Microsoft SQL Server

Frameworks & Libraries: React Node.js, Express.js, Flask, Django, Tailwind CSS, PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy, Axios, Open AI

Tools & Practices: GitHub, Docker, RESTful APIs, OpenAI API, Gemini API, Hume AI API, Raspberry Pi, Excel, Figma, VS code, Visual Studio

Leadership: Co-Founder, Membership & Treasury Director, St. Thomas University Computer Science & Tech Club (2022–2023) | NAIA Student-Athlete (Point Guard), St. Thomas University Men's Basketball (2021–2023)
